### Overweight Pets:

If your dog or cat is overweight, feed a little less each week until your pet reaches his ideal weight. Dogs fed raw naturally shed pounds and fat turns to lean muscle.

\*\* Giant Breeds: It would be rare to have a giant breed eating at high activity or performance level because most are just not that active and they generally have a lower metabolism than smaller breeds. Example: Our English Mastiff Hooch is 8 1/2 years old and weighs about 200 lbs. Hooch is a typical Mastiff, he's a real "couch potato". Aside from his two forty-minute daily walks, you can find him snoozing on his oversized bed or laying around on the porch. Hooch only requires an average of 2 3/4 lbs. of raw food per day to maintain his trim, muscular form. Hooch has no desire to eat any more than this. You know your companion animal's ideal weight and condition and whether or not they are satisfied or still hungry, so adjust accordingly.
